CAP NEWS - Local SPOTLIGHT

Vol. 2 – 12/01/2023

Please Support Maine Veterans.

Maine Veterans Project

- Donations will be collected from November 24th- December 31st
- MVP Logo sold at Stores for a Minimum \$1 donation
- Booth at the Tool Show
 - Raffle to help raise money
 - WABI news report to educate Customers on NAPA's collection of Donations

Hi Team,

I just wanted to take a few minutes to ensure that you have all the information on the Maine Veterans project Donations. The Maine Veterans Project is a local group that help Maine Veterans in need. For example, with heating fuel, utilities and fixing their cars and many more.

- I am sending MVP logos for the customers to fill out a name on when they do the donations. This will be sent to stores via the Bangor Warehouse.
- Send the logos out with Salesmen and Drivers to help with donations.
- After the customer purchases and fills out the logo, put the completed Logos up on the wall for other customers to see. Remember the logos are one sided, so please put in a location where the customers can see the logo side.
- The donations are starting at \$1 donation.
- The Item number is MVP1.
- Type in the item number and the quantity 1 for \$1 donation
- If the customer would like to donate more, then change the quantity to reflect the amount they would like to donate. For example, 1=\$1, 5=\$5 and so on.

This is an amazing cause and I hope that we can raise lots of money for such a good cause. If you have any questions, let me know. I appreciate your help with this.

Melissa Laliberty

SOR PL6100 – 12V REFLASHING 100A POWER SUPPLY AND 60/40/10A BATTERY CHARGER

The PL6100 provides stable power for vehicle reflash applications, with up to 100 amps available on demand. This mode supports OE stable power supply requirements and allows operator control of target system voltage, from 13-14.9 Volts in 0.1V increments. Using a switching power supply and advanced circuitry, the PL6100 keeps voltage ripple to a minimum to deliver clean power that will not disrupt the reprogramming event. It also features fast load responsiveness to minimize voltage drop when system demand spikes.

Description

- Power Supply Mode
- 12 Volt operation
- Automatic charging mode for easy operation
- 60A max charge for fast charging of batteries to Group 31
- Properly charges a variety of lead acid battery types
- Power supply mode to support programming
- Precise voltage control and quick response to load
- Extra long 13' cables reach all vehicle starting points
- Ability to manage depleted and sulfated batteries
- Advanced Charging Logic

Requires
20A Service

CAP NEWS – Did “U” Know

Vol. 2 – 12/01/2023

A PERMANENT FIX FOR CHRYSLER V6 LEAKING OIL FILTER HOUSINGS

It no secret vehicle manufacturers love to use plastic whenever they can. And why not? It's inexpensive, can be made into virtually any shape, and surprisingly durable for most uses. While those qualities make it exceptionally versatile, even in direct contact with metal engine parts, some parts are just better suited to metal construction.

The oil filter housing on many Chrysler Pentastar V6-powered vehicles is a perfect example. Pentastars are found in a wide range of vehicles, from Chrysler minivans to Jeep Wranglers to Ram pickup trucks displacing either 3.2L or 3.6L. The V6 is an all-purpose pinch-hitter, installed in longitudinal- and transverse-mount applications.

CAP NEWS – Did “U” Know

Vol. 2 – 12/01/2023

The oil filter housing, which lives beneath the intake in the engine’s valley, also serves as a base for the oil cooler and contains some complex passages for coolant. It’s in a particularly hot area and has harsh chemicals running through it under pressure. The original equipment design is an impressive piece of engine architecture, injection molded from tough polypropylene and conveniently located to serve up the oil filter front and center for quick, easy maintenance.

But repeated heat cycles eventually take their toll on critical mating surfaces, leading to your Chrysler V6 leaking oil where the housing mates to the engine. By about 85,000 miles, the leaks can often be substantial enough to risk significant oil loss, not to mention the unpleasant sight and smell of dripping oil. Overtightening the oil filter cap during oil changes can also lead to a cracked housing, adding another potential point of leakage. Replacing the housing, even with a new OE part, virtually ensures the problem will return eventually, especially as owners hold onto their vehicles longer and pile more miles on than ever before.

The only permanent solution is this aftermarket-exclusive NAPA Solutions oil filter housing crafted entirely from aluminum to prevent the warping that causes leaks in the OE design. This precision-engineered replacement part bolts to the engine just like the plastic factory original but maintains its dimensional stability for a lifetime of reliable, leak-free service.

This upgraded NAPA Advantage assembly arrives ready to install with new mounting gaskets and manifold gaskets so there’s no need to save the old gaskets or order new ones. Give yourself the peace of mind that this is the last time you will need to replace this critical part.
